

Fungicide Timing: Winter Barley

(Two-row, Six-row)

6 days after Head Emergence

The optimum time to apply a single fungicide application to control Fusarium head blight (scab) and reduce deoxynivalenol (DON) is **6 days after Feekes growth stage 10.5**. Feekes 10.5 is when 100% of the heads have emerged.

U.S. Wheat & Barley
Scab Initiative
