USDA-ARS/  
U.S. Wheat and Barley Scab Initiative  
FY09 Final Performance Report  
July 15, 2010

Cover Page

PI: Paul Knight

Institution: Pennsylvania State University

Address: Dept. of Meteorology  
606A Walker Bldg.  
University Park, PA  16802-4507

E-mail: pgk2@psu.edu

Phone: 814-863-1842

Fax: 814-865-3663

Fiscal Year: 2009

USDA-ARS Agreement ID: 59-0790-7-077

FY09- USDA-ARS Award Amount: $ 41,402

USWBSI Individual Project(s)

Total Award Amount $ 41,402

Principal Investigator  
Date  
6/18/10

* MGMT – FHB Management  
FSTU – Food Safety, Toxicology, & Utilization of Mycotoxin-contaminated Grain  
GDER – Gene Discovery & Engineering Resistance  
PBG – Pathogen Biology & Genetics  
BAR-CP – Barley Coordinated Project  
DUR-CP – Durum Coordinated Project  
HWW-CP – Hard Winter Wheat Coordinated Project  
VDHR – Variety Development & Uniform Nurseries – Sub categories are below:  
  SPR – Spring Wheat Region  
  NWW – Northern Winter Wheat Region  
  SWW – Southern Winter Wheat Region
Project 1: Deployment of Models Predicting the Risk of Disease Epidemics and DON.

1. What major problem or issue is being resolved relevant to Fusarium head blight (scab) and how are you resolving it?

The assessment of the risk of scab for the entire wheat and barley planting region east of the Rockies for the growing season is being predicted based on the research of plant pathologist (Erick DeWolf and colleagues) and the known relationship to atmospheric conditions (Temperature and Moisture [both rainfall and dew point]).

The innovative component of this prediction system includes the use of several models (winter vs spring wheat, experimental, etc.), dense resolution gridded atmospheric data (5km horizontal resolution) and an increasing number of agricultural weather networks (16 of 25 states) used to bias correct the gridded data for a more accurate assessment of the risk along with a 3 day forecast.

The user interface includes a survey which gathers user feedback on the utility of the prediction system and also displays expert commentary.

2. List the most important accomplishment and its impact (i.e. how is it being used) to minimize the threat of Fusarium head blight or to reduce mycotoxins. Complete both sections (repeat sections for each major accomplishment):

Accomplishment:
The primary accomplishment is a daily real-time assessment of fusarium head blight and DON across the wheat/barley growing regions of the nation beginning in early April and continuing into mid-August. Growers can make scientifically sound decisions based on the guidance provided and also receive notices of expert commentaries for their region/state.

Impact:
A better informed growing community that uses amelioration for scab in the most responsible way while increasing the productivity of their farms.
Include below a list of the publications, presentations, peer-reviewed articles, and non-peer reviewed articles written about your work that resulted from all of the projects included in the grant. Please reference each item using an accepted journal format. If you need more space, continue the list on the next page.
