FY15 Total ARS Award Amount $ 40,960

Principal Investigator: Erick De Wolf
Date: 7/1/16

* MGMT – FHB Management
FST – Food Safety & Toxicology
GDER – Gene Discovery & Engineering Resistance
PBG – Pathogen Biology & Genetics
EC-HQ – Executive Committee-Headquarters
BAR-CP – Barley Coordinated Project
DUR-CP – Durum Coordinated Project
HWW-CP – Hard Winter Wheat Coordinated Project
VDHHR – Variety Development & Uniform Nurseries – Sub categories are below:
  SPR – Spring Wheat Region
  NW – Northern Soft Winter Wheat Region
  SWR – Southern Soft Red Winter Wheat Region
Project 1: Development of Scab Resistant Wheat Cultivars for Kansas.

1. What are the major goals and objectives of the project?

   The long-term goal of this research is to develop hard red and hard white winter wheat cultivars adapted for Kansas with improved resistance to scab. Short term objectives are to: 1) test existing local cultivars for resistance, 2) test advanced breeding lines for resistance, 3) test exotic germplasm lines for resistance, 4) test the Hard Winter Wheat Scab Nursery (Kansas, Nebraska, South Dakota, North Dakota) for reaction to scab, and 5) incorporate new sources of scab resistance into the Kansas wheat breeding program. Testing will be done in misted field nurseries using soil-applied infested corn grain inoculum and in the greenhouse using single-floret inoculations. Visual disease evaluation methods will be used to rate the percentage spikelets killed by the pathogen and ground grain samples will be analyzed for the toxin DON.

2. What was accomplished under these goals?

   1) major activities. Until involvement in the USDA Scab Initiative, there was virtually no effort to identify sources of scab resistance in Kansas breeding programs. The Initiative has resulted in the development of accurate and efficient greenhouse and field testing nurseries that are providing useful ratings for current cultivars in Kansas and advanced breeding lines, and allow participation in the regional scab nurseries.

   2) specific objectives. The FHB phenotyping nurseries allow dissemination of information to growers on the reaction of current commercial cultivars, selection by breeders for scab resistance in their breeding lines, and identification of additional sources of resistance from other breeding efforts in the region that can be incorporated into Kansas breeding lines. Kansas has also taken the lead in organizing a Hard Winter Wheat Scab Screening Nursery for the hard winter wheat breeding programs of Kansas, Nebraska, South Dakota, and North Dakota. This latter nursery provides valuable data on the reaction of hard winter wheat cultivars to scab in their area of adaptation. The long-term goal of the research is to develop, deploy, and advertise winter wheat cultivars adapted for Kansas with improved levels of resistance to scab.

   3) significant results. Two commercial cultivars in Kansas (Hondo and Heyne) were identified in 2000 (and confirmed in later years) as having good levels of scab resistance (3 and 4 on the 1-9 scale where 1=immune and 9=highly susceptible). These cultivars averaged only 12 and 15% scab, respectively compared with about 50% in susceptible cultivars. Similarly, the cultivar Lakin has shown moderate levels of resistance with 22-34% scab. Six other commercial cultivars have also displayed moderate levels of resistance equal to, or better than, Lakin. Therefore, we have identified a few sources of scab resistance already present in cultivars adapted to Kansas that can be used by producers and may be potential sources of “native” resistance for the development of future cultivars. Both KSU wheat
breeders and the USDA wheat geneticist have been involved in the project by having their breeding lines evaluated for resistance to scab. Several breeding “populations” are tested each year from which the breeders make selections of promising lines showing resistance. Also, there are approximately 40 advanced breeding lines (The Kansas Intrastate Nursery) that are tested each year. In 2009, Kansas State University released the first hard red winter wheat cultivar adapted to Kansas selected for improved levels of resistance to scab.

4) key outcomes or other achievements
Because of the scab testing efforts, a new column for reaction to “Head Scab” was added to the popular KSU extension publication *Wheat Variety Disease and Insect Ratings* for the fall, 2000 issue and has been updated in each subsequent year. For the first time, this has allowed producers in Kansas to use the reaction to scab to help select cultivars for planting. Similarly, data produced from nurseries funded by the Scab Initiative have been incorporated into another popular extension publication (*Kansas Performance Tests with Winter Wheat Varieties*). Both publications are available as “hard copy” or online. The involvement of breeders has resulted in significant progress to improve the level of resistance to scab in future commercial wheat cultivars. This research has resulted in germplasm releases in 2004 and 2014 from Kansas State University with resistance to scab. It normally takes 10-12 years to produce a new wheat cultivar from the time initial crosses are made. Right on schedule, the first Kansas scab-resistant cultivar (Everest) produced directly from the activity of the Initiative was released in Fall 2009, 10 years after beginning to receive funding from the Initiative. It has increased in popularity so that it is now is the number one planted cultivar in Kansas. The adoption of this cultivar has significantly lowered the susceptibility of the state’s wheat crop to scab; 22% lower statewide and 40% lower in the eastern part of the state where scab is prevalent.

3. **What opportunities for training and professional development has the project provided?** None

4. **How have the results been disseminated to communities of interest?**
Reports of the phenotyping nurseries are sent to all cooperating breeding programs. These include the public wheat breeding efforts in Kansas, Nebraska, South Dakota, and North Dakota. Similar reports are sent to the breeding efforts in participating private companies (AgriPro, Limagrain, and West Bred). As noted above, the extension publications *Wheat Variety Disease and Insect Ratings* and *Kansas Performance Tests with Winter Wheat Varieties* are updated each year for access online or via paper copies by wheat producers, county agents, and crop consultants.
Training of Next Generation Scientists

Instructions: Please answer the following questions as it pertains to the FY15 award period. The term “support” below includes any level of benefit to the student, ranging from full stipend plus tuition to the situation where the student’s stipend was paid from other funds, but who learned how to rate scab in a misted nursery paid for by the USWBSI, and anything in between.

1. Did any graduate students in your research program supported by funding from your USWBSI grant earn their MS degree during the FY15 award period? No

   If yes, how many?

2. Did any graduate students in your research program supported by funding from your USWBSI grant earn their Ph.D. degree during the FY15 award period? No

   If yes, how many?

3. Have any post docs who worked for you during the FY15 award period and were supported by funding from your USWBSI grant taken faculty positions with universities? No

   If yes, how many?

4. Have any post docs who worked for you during the FY15 award period and were supported by funding from your USWBSI grant gone on to take positions with private ag-related companies or federal agencies? No

   If yes, how many?
**Release of Germplasm/Cultivars**

**Instructions:** In the table below, list all germplasm and/or cultivars released with full or partial support through the USWBSI during the FY15 award period. All columns must be completed for each listed germplasm/cultivar. Use the key below the table for Grain Class abbreviations. 

*Leave blank if you have nothing to report or if your grant did NOT include any VDHR-related projects.*

<table>

Add rows if needed.

**NOTE:** List the associated release notice or publication under the appropriate sub-section in the ‘Publications’ section of the FPR.

**Abbreviations for Grain Classes**

- Barley - BAR
- Durum - DUR
- Hard Red Winter - HRW
- Hard White Winter - HWW
- Hard Red Spring - HRS
- Soft Red Winter - SRW
- Soft White Winter - SWW

(Form – FPR15)
Publications, Conference Papers, and Presentations
Refer to the FY15-FPR Instructions for listing publications/presentations about your work that resulted from all of the projects included in the FY15 grant. If you did not have any publications or presentations, state ‘Nothing to Report’ directly above the Journal publications section.
